5. LENGTH OF OBSERVATION Orbit Moon in 6 Minutes 6. TYPE OF OBSERVATION Ground-Visual (TX) 7. COURSE Last around Moon 8. PHOTOS D You PLY No 9. PHYSICAL EVIDENCE D You RE No	Observations of object orgiting the moon at an average of every of minutes during October and November 59. Report submitted in 1965. COMMINIS: Moon under observation by astronomers during this period failed to substantiate appearance of an object orbiting the moon. It is believed that some other object or objects crossed the path of the telescopes view during this period such as debris in the wind, a/c, birds, leaves ect and that these wern natural phenomena or objects.

FOREIGN TECHNOLOGY DIVISION

AIR FORCE SYSTEMS COMMAND UNITED STATES AIR FORCE WRIGHT-PATTERSON AIR FORCE BASE, OHIO

ATTH OF: TDEW

SUBJECT: Request for UFO Information,

21 Apr 65

TO: Hq USAF SAFOI-CC (Mr. Wash D C 20330

1. Reference the attached letter from requesting information on unidentified flying object observed by himself and a friend of his from 8 Oct - 9 Nov 59.

2. No object such as described by them has been reported in any of the scientific literature associated with studies of the moon. It is possible that the Smithsonian Institute estimated their speed as 70,000 mph, assuming a certain altitude above the moon surface, in which case, a computed speed would now be possible. Copies of your reported observation have been forwarded to Dr J Allen Hynek, Astronomical Consultant to Project Blue Book. To our knowledge no other report of this nature has been received by Project Blue Book. We are returning the cards, belonging to the project Blue Book. We are returning the cards, belonging to the project Blue Book.

FOR THE COMMANDER

Deputy for Technology and Subsystems 2 Atchs a/s

B

YOU - THE NUCLEUS OF SECURITY!

John P. Spaulding It. Colonel, 215AF Chief, Civil Branch Community Relations Office of Information

sir:

Dwish to thank you for the copy of Blue Book
Report which I requested. However, I noticed
on page 5 last paragraph that all outdated
reports were no longer in your possession.
The purpose of my inquiry is to find out if
an abject which I and a close priend of min
saw from 0 stoken 8, 1959 — Tovember 9, 1959 was
reported. He are both amateur astronomers
and have many copies of our sightings during
thus 33 days. I realize that this was
almost six years ago but my friend and I
ful that this object should have been
regarted. Our reasons for not reporting it

then are numerous but this object was important. It was circumlunar and I can elaborate a great deal on our observations and the object. In 1959 we weate to the Smithsonian institute and related to them only the time of arbit L6 min) I and they ruplied that for a 6 min orbit it'd have to go 70,000 miles per hour. Evidently they did not takes us seriously for in both Paul's Achoal and mine we so her had enough math and phyrics and common sense to know that it would be impossible to obtain a speed without knowing a distance. I have drawn up many various type of possible and arbits and each are so different that a set obstance is impossible to obtain, only a large internal. I have enclosed one of our capies of our regards on 3x5 cards. I call your attention to how few UFO's were reported in '59 and again to my regard in 59 on the cards. I am certain of my findings and have many thought about the subject. I would be more than happy to write and type a detailed report of my findings and theories on the size, speed et of the object. I realize that your office is quite busy and I appreciate your interest a great deal. This entire discovery may be of minar significance

trut then who knows? I will go on looking for an answer and if your office no longer has the resports of 59 I would appreciate it very much is I could find out where I could obtain such information. In ween of our moon program at queent I feel rather obligated to regart our fundings - even our fantastic as They seem, They are true. Thank you for your line. With sincere respect, University, alabama University, alb. It. Colonel John F. Spaulding Chief, Civil Branch Community Pelations Division Defartment of the aire Force Office of the Secretary Washington, D.C.

FILE 8-9

PROPERTY OF

THE OCCURENCE OF LUNAR 8 (1)

DATE: October 8 - November 9, 1959

PLACE OF OBSERVATION: Mobile, Alabama
October 8- satellite found orbiting moon by

TIME: Between 6&8 P.M.

Phase of moon: First Quarter (according to world almanac of 1959) (exactly [= quarter) DIRECTION: Satellite traveled West to East (rim toward dark side)

The satellite passed over the crater

Copernicus on the way around. Impossible to

determine whether the object or its shadow was
being observed. In either case the object app

eared as large as the crater Copernicus (60

miles in diameter)

Average time of orbit was 6 minutes; time varied slightly from one orbit to the next The object was seen every night that wea-

(3)

On November 9 the satellite either greatly increased its speed or was pursued by another object of similar likness as a double image was seen. The object then dissappeared and has not been seen since.

A letter of inquiry to the Smithsonian Institute revealed they had not seen the object; however they said that such an object:

(4)

would have to be traveling at 70,000 miles

per hour and remote controlled. As I gave

them only the time of orbit(I could compute
nothing else), I am at a loss to under
stand their basis for this figure.

I confirmed findings; the object was also seen by my parents.

Talone saw the satellite's dissappearance;
To date there is no indication of its origin
